

About CyberWell:

CyberWell is an independent, tech-based nonprofit combating the spread of antisemitism online, operating globally. Its AI-technologies monitor social media in English and Arabic for posts that promulgate antisemitism, Holocaust denial and promote violence against Jews and their allies based on the International Holocaust Remembrance Alliance's (IHRA) working definition of antisemitism. Its analysts review and report this content to platform moderators while indexing all verified posts in the first-ever open database of antisemitic social media posts, cataloging it openly for transparency at app.cyberwell.org. Through partnerships, education and real-time alerts, CyberWell partners with social media platforms and digital service companies to help them enforce their policies more effectively, promoting proactive steps against online Jew-hate.
